Panels and Profiles

Combiboard®

Panels and Profiles

Stands for high quality PVC panels and profiles. Combiboard offers endless user possibilities and is especially suitable for situations where high demands are set on durability, user-friendliness, hygiene and speed of construction.

Combiboard is like Lego: strong, easy to use and versatile

With Combiboard you can build almost anything. You can use it to construct big projects like halls and car washes or small jobs like crates and table tops. It can be used for new construction, renovation and temporary projects.

The panels are also very efficient to use, as they are easy to install and can be produced to specific lengths, saving on time, money and waste. Moreover, the panels are straightforward to process using regular tools and additional devices, profiles and the like are easy to attach.

Combiboard Alfa

Combiboard Alfa is excellent for partition walls and pen partitions. This is why Combiboard is the favourite product for animal shed contractors all over the world.

The high grade top layer provides excellent resistance to chemicals like ammonia. The panels are hygienic and easy to clean, thanks to the smooth edges and the seamless connections. Any height or width can be

achieved by simply combining the various panel widths. There are special caps available which seal the sawing edges and prevent any penetration from dirt, moisture and pests.

Combiboard Alfa is extremely versatile. Among other things, the Alfa model is used for car wash partitions, table tops, door panels and even crush barriers.

new construction

transportcrates sanitary units pen
partitions temporary partition
walls bulk storage corridors renovation
carwashes permanent walls ceilings
control rooms storage spaces emergency showers
halls factorydoors sliding doors and so on

Combiboard Beta

Beta construction panels are specially designed to construct (temporary) walls and ceilings. The panels are fast, efficient and easy to use. The end result is a strong, hygienic, watertight and ready-to-use wall. Thanks to the precise, fast and simple click connection, the panels can be easily removed and reused for other projects. The panels

can be ordered at any length. This saves on processing time and waste. Finally, thanks to a range of additional accessories, you can make a variety of projects that can be completed to very precise specifications.

Combiboard Gamma

The Gamma panels are the tough guys in the assortment. They are fire-rated Euro class B (standard: DIN EN 13501-1) and extremely robust. This makes Gamma panels ideal for heavy-duty work; when fire safety is important or in situations where extra strength or impact resistance is needed. Among other things,

Combiboard Gamma can be used to make a free-standing wall and may be used both vertically and horizontally. This means that you are free to design whatever you want without worrying about the Euro classification. This strongly distinguishes Gamma from the other plastic partition systems on the market.

Combiboard Zeta

Combiboard Zeta is truly unique. With this system you can build strong and maintenance free walls in a very short time. First, the panels are placed simply by hand. Next, any needed wiring, windows or doors can be applied. Finally, the panels can be filled with cement or insulation materials and that's it, you are ready! Thanks to the drilled holes in the partitioning, the filler spreads itself out evenly within the wall, thus providing a homogenous structure. The end result is a

rapidly built, strong and completely finished wall that is unaffected by moisture, mould, pests and aggressive liquids. And thanks to the high grade top layer, a "Zeta-wall" is colourfast and very hygienic. Combined with the other Combiboard panels and profiles, the possibilities and applications are endless: slaughterhouses, cleanrooms, stables, bulk storage, garages and shed buildings, to name but a few. Every day new uses are discovered.

Combiboard characteristics:

- Durable, hard-wearing and colourfast
- Quick and easy to use
- Labour, waste and money saving
- Wide choice of models, sizes and colours
- Made to order lengths available
- Including matching profiles
- Unaffected by moisture, mould and pests
- Resistant against most chemicals
- Easy to clean, hygienic and virtually maintenance free
- Made with recycled PVC
- Reusable and 100% recyclable

The panels are covered with a smooth high grade PVC top layer. As a result the panels are hygienic, colourfast and easy to stick or print on.

The company

Combiboard is a product made by Profextru, a former daughter of the Wavin Group, with over 60 years of experience in the coextrusion of heavy plastic profiles.

We are specialised in the development and production of durable innovative solutions for demanding applications. Our products are durable and sustainable alternatives for wood, steel and cement. Among other things, our products are widely used in the agricultural industry and in the civil engineering sector.

Besides **Combiboard** we are also the producer of **Prolock**, a patented hybrid piling sheet system, and **Profort**, a durable and maintenance-free wall cladding system.

Durable and Sustainable

All our products are designed to last as long as possible, with minimal impact on exhaustible natural resources and producing minimal waste in the supply chain.

We use primarily recycled PVC as a raw material. This gives our products a life expectancy of 50 years+ and makes them 100% recyclable. Furthermore, it contributes to lowering the waste mountain. We strive to reuse all our residual materials.

Responsible business practise is part of our corporate DNA. Attention to energy saving and protection of the environment is firmly rooted in our policy and culture. Associated measures and operating plans are integrated into our strategic plan. Our goal is to keep our carbon footprint as small as possible.

Committed and flexible

We are developer, producer and supplier; this keeps the process lines short and efficient and the organisation flexible. We believe in partnerships with both our customers and our suppliers. The basic principle is that a long term co-operation and an open dialog results in a mutual benefit. This contributes to the reliability and involvement of all parties.

For further information, please look on our website or contact us directly and we will be happy to help you.
